

Our Vision

Our Roosevelt school gardens foster a principled, caring, and cohesive culture that values the sustainability of our natural environment and its relationship with the school and community. Our goal is to establish a living laboratory for the development of our individual sense of self, our relationship with nature, our community, and our world. As we evolve and grow into internationally minded agents of change, we take ownership and become aware of the transformative process of our natural and urban environment.

- Sensory Garden

Curriculum Connections

Roosevelt aims to engage students in the garden across all subjects and all grade levels. As an International Baccalaureate school, our gardens facilitate opportunities for interdisciplinary units of study.
